

Grasscycling

Grass clippings and other yard debris represent a large percentage of solid waste deposited in landfills. The disposal of this waste material is expensive and takes up valuable landfill space.

The obvious solution to the clipping disposal problem is to recycle the grass - grasscycling. Grasscycling can be easily accomplished by returning the clippings to the lawn. For clippings to break down rapidly, the lawn should be mowed frequently enough so that large amounts of leaf residue do not remain on the surface of the turf. As a rule of thumb, no more than one-third of the leaf tissue should be removed during the mowing operation.
